NEW PRODUCTS FROM OTC

FOLDING ROLLER REAR

Segmented roller helps the operator with thicker outserts, ensuring better quality and easier set up.

OEM#: MV2408
OTC-1007-2B

MODIFIED UPPER FOLD ROLLER

Modified upper fold roller machined to .630 diameter helps the operator run thicker product through your knife box, avoiding tears, rips and roller marks made by the thicker roller.

OEM#: MV3058
OTC-1006-1M

FEMALE KNIFE SHAFT

Same quality as the OEM for less.

OEM#: MV2302
OTC-1016-2-12F

ROLLER LEVERS

ROLLER LEVERS

High grade aluminum and quality bearings go into the manufacturing of these roller levers.

BUSHING BLOCKS • CHECK NUT • SPRINGS

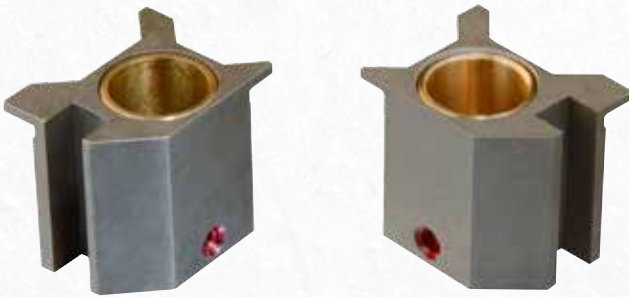

BUSHING BLOCK WITH 10mm BUSHING

LEFT
OEM # V0193
OTC-1005-1-10

RIGHT
OEM # V0192
OTC-1005-2-10

BUSHING BLOCK WITH 12mm BUSHING

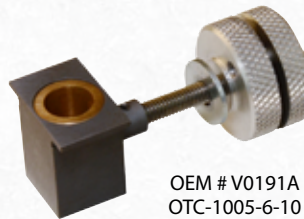

LEFT
OEM # V0800
OTC-1005-3-12

RIGHT
OEM # V0801
OTC-1005-4-12

All Bushing Blocks are made from the same material as the OEM, then case-hardened to provide added strength on the surface area. The result is a block that lasts twice as long, for about half the price. Checknuts are made from an aerospace aluminum, thus avoiding tightening into the frame. The screw is nickel plated to prevent unnecessary wear. All springs are matched for rigidity and size. Compression springs are available in softer styles that can be used in the first unit.

BUSHING BLOCK POS. 1 WITH 10mm BUSHING

OEM # V0191A
OTC-1005-6-10

BUSHING BLOCK POS. 1 WITH 12mm BUSHING

SOFT COMPRESSION SPRING WITH CAP

OEM # V195
OTC-9005-1-16S

ROLLERS • SLITTER SHAFTS

All Rollers are machined from a heat-treated alloy for superior strength to ensure precision tolerances rather than heat-treating after machining, which can warp and distort the rollers. The MV-97 rollers are covered in a titanium nitride coating (TiN) to provide maximum durability for these workhorse rollers.

SHAFTS • PLUNGERS

All shafts are made from high quality steel and then assembled with the appropriate gear. Plungers are made in a single-piece construction to prevent the tips from breaking then fitted with the magnetic sleeve for proper functionality. Transmission shafts are for the OEM's transmission boxes and are manufactured with high grade stainless steel.

OTC ORIGINALS

We proudly present our signature OTC Quick Release Transmission Box. This box is designed so you can change a belt or shaft in minutes compared to the hours it currently requires. This box also comes with several upgrades, including all-steel gears and pulleys (compared to aluminum used in the older OEM versions). Plus, this box uses hardened races on the end of the transmission shafts to prevent wear and needle bearings to increase bearing life. In all, this box is made to stand the test of time while significantly decreasing downtime when performing maintenance or repairs. **Easily a customer favorite!**

OTC-1600-10-04

LEFT

RIGHT

MAGNETS FOR PACKER BED

OTC-1500-10-30

SPACER FOR PACKER BED

OTC-1501-01

Olympic Tool Company is pleased to offer our quick make-ready packer bed for the end of your MV-97 lines. The packer bed is constructed with magnetic stainless steel and is superior in strength. This bed will not bend or kink. The packer bed is 32 inches long, giving the operator more room and time for packaging. The side rails are moved to the desired size by simply disengaging the magnets and sliding into place. This operation takes seconds and eliminates the need for cut-outs used for tightening the screws into place. The end result is a delivery system that takes a minute to set and does not require cardboard and taping to cover the screw cut-outs where product can get damaged or snagged, causing jam-ups and product waste. Four plate roller block side frames are constructed for replacements on your right angle machines. These items are currently unavailable from the OEM.

STOP BARS

STOP BARS

OTC-1014-3-ASSY

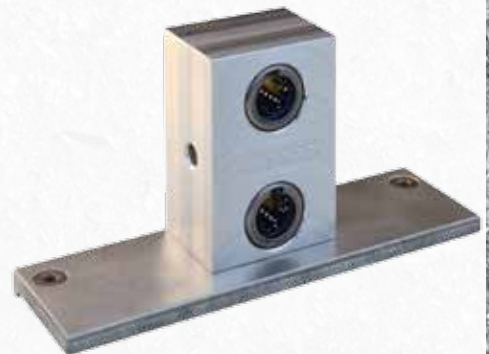

3" PLATE OTC-1014-34

All Stop Bar assemblies come complete as pictured. Stop bars are machined from solid steel rather than casting material used by the OEM. Stop bars are also treated with black oxide to prevent rusting. Bearing housing and knife holder are made with steel PEM inserts to help prevent stripping caused by over tightening into the OEM's aluminum plate. Knife shafts and linear bearings sold separately.
